

```
/** ** Program to convert Fahrenheit temperature into Celsius
        temperature using command line  ** */

import java.lang.*;
import java.io.*;
class temp
{
    public static void main(String a[])
    {
        try
        {
            DataInputStream dts=new DataInputStream(System.in) ;
            float m=Float.parseFloat(a[0]);
            double f;

            f = ( ( 9 * m ) / 5 + 32 );
            System.out.println("tempreture in fahrenheit =" +f);
        }
        catch(Exception x)
        {
            System.out.println(x.getMessage());
        }
    }
}
```

Output:

```
C:\WINDOWS\system32\cmd.exe
D:\prac>java temp
null
D:\prac>javac temp.java
D:\prac>java temp 45
tempreture in fahrenheit =113.0
```
